Objective :

MERN Stack Developer with experience in building scalable web applications and integrating AI technologies such as LLMs and RAG to create intelligent user experiences.

Education :

Bachelor of Technology in Artificial Intelligence and Data Science
Muthayammal Engineering College (Autonomous), Rasipuram

2023 – 2027
CGPA: 7.01

Projects:

Udyam Verification API

Description : Engineered zero-cost CAPTCHA automation using Playwright + ddddocr, eliminating paid OCR dependency. Reduced manual verification from ~5 min to under 30 sec via FastAPI REST endpoint returning structured JSON results

Technology : FastAPI, Playwright, ddddocr

Link : <https://udayam-1.onrender.com>

DocQuery AI

Description : RAG-based PDF Q&A system using LangChain, Gemini, ChromaDB, and Streamlit for real-time document querying. Conducted integration testing across retrieval and generation pipeline to validate accuracy.

Technology : Python, LangChain, Streamlit, Google GenAI (Gemini), ChromaDB, Sentence-Transformers, PyMuPDF

Git hub : <https://github.com/Soundar-rajn916/learn-rag>

LeetCode Hint Assistant

Description : AI-powered Chrome Extension delivering Socratic DSA hints via Groq Llama models with a custom UI and Node.js backend. Performed end-to-end testing of content scripts and API, debugging edge cases across hint flows.

Technology : JavaScript (Chrome Extensions API), Node.js, Express.js, Groq API (Llama 3 LLM inference)

Git hub : <https://github.com/Soundar-rajn916/leetcode-hinter>

LeetCode Hint Assistant

Description : Intelligent, multi-agent platform that generates complete course textbooks from scratch using an orchestrated AI pipeline with a self-reflection feedback loop. Implemented a modular REST API-first architecture enabling isolated testing of standalone agents and orchestrated parallel compilation workflows.

Technology : Python, FastAPI, React.js, Groq API (Llama 3.1 LLM inference), BeautifulSoup

Git hub : https://github.com/Soundar-rajn916/ai_course_crm

Techstack :

- **Languages** : JavaScript, Java, Python.
- **Frameworks** : React.js, Tailwind CSS, HTML, CSS, Bootstrap, Node.js, Express.js, JWT, Fast API.
- **Database** : MongoDB, SQL.
- **GenAI** : Prompt Engineering, RAG, LangChain, N8N
- **DevOps** : Docker, Kubernetes, AWS
- **Testing & QA**: Unit Testing, Integration Testing, API Testing (Postman), Code Review
- **Tools** : Git, GitHub, VS Code, Postman

Internship :

Organization : EchoDigitalWorks

Role : AI Engineer intern

Duration : 4 months

Description : As an AI Engineer Intern, I design and develop intelligent AI-powered applications using LLMs, RAG, and modern AI frameworks. I build scalable AI solutions, integrate machine learning models, and create prompt-driven workflows delivering accurate, context-aware experiences. I participate in code reviews and collaborate with QA teams to analyze and fix defects, perform unit testing and integration testing on AI pipelines, and ensure application performance, security, and reliability across the full software development lifecycle (SDLC).

Workshop :

- Conducted a Git & GitHub workshop, introducing students to version control, repository management, and collaborative development workflows.
- Conducted a MERN Stack workshop, teaching students modern web development concepts including frontend design with React, backend development with Node.js and Express.js, and database management using MongoDB.

Hackathon :

- Participated in SDG Hackathon in KSR – live Attendance Verification System
- Participated in HackIndia Hackathon 2026 in MEC – Your Legally (AI legal Assistant)

Declaration :

I hereby declare that the information provided above is true and correct to the best of my Knowledge and belief.
